	W. JAMES, Asstt. Inspector of Markets.			

PARTING OF ALL KINDS at the most moderate prices at THE "DAILY PRESS" OFFICE. All proofs are read and all work superintended by Mr. James. Always equal and generally superior to that done anywhere else.

A recent interview with Professor Barnard, of the Lick Observatory, who has just published in the *American Scientist* some interesting statements with regard to his prolonged photographic study of the Milky Way. To show what progress had been brought about in instruments of observation, the Professor remarked that he had not seen the number of stars in the whole of the Milky Way at about 20,000,000. With one dry plate exposure of five minutes, they could now photograph that number. The Lick telescope shows 20,000,000 in all; photography, at least, shows a million more. The Professor said there were reasons for believing that the dark interstices on the photograph were also full of suns not near enough to be distinguishable.

We have all of us experienced the unpleasantness of dusty linens about the house, but the process of dusting is not so simple as to calculate the number of particles of dust which our clothes might contain or to estimate the amount of dust which we may draw into our lungs inspired. In this report we have endeavored to give some idea of the intensity of dust contamination during the past year at the observatory on Doña Juana, elaborate examinations have been made on numerous specimens of the human body, and the results of these examinations are given. The average number found in one cubic inch of air on the summit of the mountain was 111.4, the highest number being 336.16, while on several occasions at lower altitudes the number was as high as 1,640.000. Such dust particles have at times been observed in the same volume of air, and even their number has been found to vary.

[illegible]

Preparations of hydrogen peroxide having been recognized as powerful disinfectants and having been recommended and used with advantage in a great number of cases of diptheria, and in this respect have recently been again brought forward as a most practical means of prompt treatment against cholera epidemic, the following method has been made handy method of removing bacteria from drink water for household purposes during outbreak of cholera, or other "typhoid diseases." It is stated in the authorities that the following method is the best. In addition, one part of this, is made to 100 parts of this water, was allowed to stand for twenty-four hours, will effectively destroy any cholera or "typhoid germs" in the water. The last part of the above does not, in any alteration, and it is perfectly harmless. In case this experiment should be tried it may be borne in mind, first, that the particular case of hydrogen peroxide is not to be purchased as such, as it may contain minute traces of poisonous barium salts, and, secondly, it should ensure its action, and activity on the microbes samples used must be freshly prepared.

[illegible]

at the expense of Mr. Besset—it appears that somebody had upon the idea of interviewing "somebody else on the subject of the Woman's sphere for one of the weekly papers. Presumably, however, the interview at the time. The surviving partner of the well-known firm of Besset and Rice was selected. Mr. Walter Besset, on suggesting that no woman had been really great in literature, was confronted with the name of George Eliot. "Oh," replied Mr. Rice's partner, "I am much impressed by her greatness." The writer adds: "I once had a conversation with a 'pamphant arist' who told me never could use any merit in Sir Frederic Lever's work."

An American lady interviewer asked Mr. Bennett the other day what he thought the most serious cause for a woman. His reply was that he thought the incident in the Queen was that he thought it was the worst thing that had happened since the world began. This, however, is Mr. Bennett's deliberate opinion—More—he believes that "If the question were put to any young man or woman grown up whether looking back, they would still deliberately choose to be married, he would say yes." He said that he himself had been a journalist, novelist, teacher, nurse, artist, typewriter, clock maker, & any of the many occupations open to a man. He declared that his wife preferred her matrimonial life as the noblest and highest yet open to women. The author of "The Women's Cause," says that if we have hands and honest hearts—that, in comparison with this, is the independence of the single woman, or, rather, the isolated ones who work about the average work. That all women can earn money is perfectly true. But the making of money is no reason at all for marrying men's work is also true.
